Sustainability Management

Duration: 5 Days

Language: en

Course Code: PO4-119

Objective

Upon completion of this course, participants will be able to:

- Address challenges in sustainability, including climate changes, social pressures, and urbanisation.
- Establish a business case and demonstrate leadership for proactive measures.
- Navigate the regulatory environment and respond to international policy.
- Evaluate and enhance sustainability across value chains
- Integrate design, technology, and innovation to promote sustainability.
- Foster collaboration and form strategic partnerships for sustainable outcomes.
- Implement an action plan to address the organisation's social, economic, and environmental sustainability challenges.

Audience

This course is designed for anyone responsible for project management or planning future organisational changes. It would be most beneficial for:

- Business Owners
- Project Managers
- Operational Managers

- Financial Officers
- IT Consultants
- Data Analysts
- Supervisors
- HR Professionals
- Marketing Managers
- Sales Managers

Training Methodology

This course uses a variety of adult learning styles to aid full understanding and comprehension. Participants will watch videos regarding data and insights into the potential future of technology and economy and how the changes will affect specific industries.

They will take part in a group discussion to understand the concerns for the future and uncover the key points of focus for businesses when moving forward with new projects. They will then construct a viable business case to make a change utilising various change models and theories to demonstrate the benefits the project will have based on the future economy, making a sustainable plan for the organisation's next steps.

Summary

Sustainable business management is a holistic approach that balances economic, social, and environmental considerations to ensure long-term success and positive impacts. It involves integrating sustainability principles into all aspects of a business, from strategic planning to day-to-day operations.

Sustainable business management emphasises responsible resource use, reducing environmental footprints, and fostering social responsibility. Companies adopting this approach often consider the triple bottom line, where success is measured by financial performance and social and environmental contributions. Sustainable business practices can lead to enhanced brand reputation, cost savings through efficient resource use, and a positive influence on the communities in which the business operates.

As environmental and social concerns continue to grow, sustainable business management becomes an increasingly crucial aspect of corporate strategy. It ensures businesses thrive

while contributing positively to the planet and society.

Course Content & Outline

Section 1: The Challenges & Opportunities in Future Change

- Strategic adaptation to technological shifts.
- Sustainable business practices in a changing landscape.
- Digital transformation and its impact on operations.
- Navigating regulatory changes for business success.
- Resilience and crisis management in uncertain times.
