

Creating a Sustainable & Valuable Supply Chain

Duration: 5 Days

Language: en

Course Code: PO1-108

Objective

Upon completion of this course, participants will be able to:

- Understand the supply chain management workflow process.
- Develop concepts of supply chain management that work in different settings.
- Discuss elements that are required for successful supply chain management in your organisation and create a strategic plan.
- Consider the future of a supply chain and how innovation can create sustainability.
 - Develop a valuable supply chain based on sensible cost-benefit analysis.
 - Monitor and analyse risk within the supply chain and create a fool-proof business continuity plan (BCP).
- Equip your employees with the principles to move forward and maintain productivity.
 - Negotiate mutually beneficial relationships with suppliers.
 - Create environmentally friendly methods and processes that will stand the test of time.

Audience

This course is designed for anyone involved in long-term supply chain management who is tasked with creating sustainable relationships and maintaining value with cost-effective

processes. It would be most beneficial for:

- Warehouse Managers
- Operations Managers
- Directors
- Business Owners
- Warehouse Supervisors
- Project Managers
- Finance Officers
- Planning Managers
- Logistics Professionals

Training Methodology

This course combines a range of adult learning styles to aid comprehension and understanding of developing a sustainable warehouse supply chain. Participants will participate in group discussions to identify the pain points of warehouse management, conduct role-playing activities to work on effective negotiation and delve into practical exercises to create effective financial models and inventory records to reduce risks.

Summary

Supply Chain Management (SCM) is essential in any business to ensure you have a reliable supply of products, equipment, and tools to run your operation effectively. Managing a supply chain requires consideration of many factors to keep your business sustainable into the future and to maintain value and growth.

To develop a sustainable supply chain, you'll need to consider your budget and future costs against more cost-effective methods and utilise strategic thinking for future forecasting. You will also need to be proactive in discovering new and innovative warehouse management methods and logistics productivity and develop beneficial working relationships with suppliers and employees to guarantee your operations' success.

Managing a supply chain in a warehouse setting also requires considering risks and how to alleviate them. You must create a business continuity plan with expert negotiation skills to ensure your deadlines are met and that your internal and external customers are happy with your service.
